Beam SatDOCK 9555

SatDOCK docking unit for the latest 9555 Iridium telephone provides a high quality semi-permanent installation, using echo cancelling and full duplex technologies to provide superior voice quality and professional hands-free or privacy mode of communications for any maritime application.

The purpose built cradle simply docks the 9555 handset securely to keep all antenna cables and power permanently connected to the dock ready for use.

only \$595

Iridium 9555 sold separately.

Iridium 9555

Iridium 9555 satellite phone is the latest, smallest and lightest handheld model from Iridium and it is connected to the only seamless and most reliable global mobile communications network.

From pole-to-pole the Iridium 9555 can always connect you to the world over the most comprehensive satellite network and backed by first-in-class 24/7 technical support.

At just under 10 ounces it stows just about anywhere and offers 3 hours of talk time with a full charge. The unit powers up in seconds and then you can simply call as though you were on a cell phone, in the middle of the pacific, North Pole or Catalina Island.
